

THE SDS TRANSFER VEST™

Good for patients, good for caregivers.

Get a better grip on patient transfers.

Now there's a solution to improving patient transfers, while reducing the risk of injury to patients as well as your staff. With the SDS Transfer Vest™ by SDS Medical, your staff has so much more control of any semi-ambulatory patient during the transfer process using our strategically placed handles, while the patient feels a comforting embrace and secure, gentle lifting during transfer.

The SDS Transfer Vest pleasantly conforms to the patient's torso, cushioning it, which in turn significantly reduces the risk of skin tears, bruising and even broken bones. The Clavicle Handles are strategically placed to allow staff to rely more on lower body mechanics, which reduces the risk of back and shoulder injuries. Vertical webbing is attached internally to the Ladder Locks, which disperses energy upward through the Glute Strap, initiating the lift from the buttocks. Our Integrated Gait Belt includes additional handles for ambulation and physical therapy, while the Back Shoulder Handles allow staff to stabilize the upper torso after ambulation for those patients at risk of falling.

Get a better grip on employee injuries.

The vast majority of workers' compensation claims in various health care settings are directly attributed to repetitive motion injuries from manual transfers. Again, our strategically placed handles allow staff to be in a much better ergonomic position, utilizing proper lower body mechanics, rather than pulling with their back and shoulders.

Get a better grip on quality of care.

The SDS Transfer Vest is the best solution on the market today to address patient ambulation, patients who are at risk of falling after ambulation, as well as employee injuries from patient transfers. Savings from potential liabilities directly attributed to accidental falls, as well as to staff injuries, will be recognized. It's easy to put on patients and easy for them to like. To keep the vest sanitary, the Tek-Stretch cover material is non-permeable and has an anti-microbial application. The SDS Transfer Vest feels so reassuring, many patients do not want it removed after transfer. The SDS Transfer Vest brings safety, dignity and security to semi-ambulatory patients, while reducing the risk of future injuries that can set back their progress. It's vital to almost any health care setting – hospitals, surgery centers, nursing homes, assisted living centers, rehabilitation centers, home health and even for in-home use with loved ones caring for a family member.

Patient safety, as well as direct costs associated with transfer falls and workers' compensation claims can be difficult to control. Get a better grip on all of them with the SDS Transfer Vest from SDS Medical.

Details

- Sizes: **Small/Medium** (28-35 ½ inches) to **Large/Extra Large** (36-44 inches)
- Expandable design assures snug fit
- Internal webbing redistributes lifting energy vertically from Clavicle Handles to the buttocks
- Integrated Gait Belt is ideal for rehabilitation by Physical Therapists
- Internal Spacer material cushions the torso, reducing the risk of injury to patients and makes them feel secure
- Tek-Stretch cover material is non-permeable and contains anti-microbial treatment
- Increases patient's safety, dignity and security while reducing injury risk to caregiver
- Poncho-style vest slips on and off over patient's head in seconds, quickly secured with Velcro®
- Disposable liner allows for sanitary multi-patient use
- The product should ONLY be utilized by semi-ambulatory patients who can partially bear weight, yet require one- or two-person assistance

Choose the vest

Safest transfer for loved one and caregiver

- Stabilizes torso
- Easy on and off
- Easily cleaned
- Anti-microbial and non-permeable
